

June 1, 2019

**For Immediate Release to all Business Partners**

Advanced Adhesive Technologies is committed to being the leading innovator in the field of flooring adhesive technology. Our employees, working together as a team, are committed to building long-lasting relationships with those suppliers and customers who share our vision of quality and our value of excellence. Our daily purpose is to provide quality products and world class services that consistently exceed your requirements, resulting in complete satisfaction and optimum performance. In the pursuit of this objective, we have made significant investments in R&D and in our infrastructure over the past two years.

One result of these investments is in product performance. Extensive testing has gotten us to the point of upgrading the MVER and *in situ* RH parameters for our AAT-420 Premium Vinyl Plank and LVT Adhesive. Effective for vinyl plank & LVT installations after June 1, 2019, the sub-floor parameters for the AAT-420 are 10lbs/24hr/1000sf [ASTM F-1869] and 95% *in situ* RH [ASTM F-2170]. The production date of the AAT-420 must be June 1, 2019, or later. You can access the updated TDS at [aatglue.com](http://aatglue.com).

In all our activities, we respect the individual, the community in which we live, and the environment that surrounds us all. I appreciate your continued support and I look forward to working with you to strengthen our market position.

Best Regards,

Gregory P. Wood  
President
